Education

Master MVA (Mathematics, Vision, Learning), ENS Paris-Saclay, Paris, France 2026 – 2027
Double degree with Télécom Paris; research-track master in applied mathematics and machine learning

– Courses: foundations of large language models, learning for time series, stochastic calculus in ML, convex optimization, optimal transport for ML, distributed and large-scale optimization.

Télécom Paris, Institut Polytechnique de Paris, Palaiseau, France 2024 – 2027
*Engineering Degree (M.Sc.), GPA: **4.0 / 4.0***

– Coursework: machine learning, deep learning, generative models, time series analysis, digital signal processing, probability and statistics, stochastic processes, optimization, numerical analysis, databases.

Lycée Hoche, Classes Préparatoires MPSI / MP, Versailles, France 2022 – 2024
Intensive program in advanced mathematics and physics; among the top students of the cohort

Research and Technical Projects

RootCause-SLM: Log Anomalies and LLM Distillation — *Python, PyTorch, LoRA* May – Oct. 2026

– Built an anomaly detector on 11M noisy HDFS log lines (575k sessions): logistic regression on log-template counts, F1 0.973 on a chronological split; tested transfer to a second system (BGL) and analyzed why it fails (57% of test windows contain unseen templates).
– Distilled a 120B teacher into Qwen2.5-1.5B with LoRA (4.4M trainable parameters) to explain anomalies locally. An audit against raw logs showed the first version found the true cause 0/250 times; redesigning the input to a whole-session summary raised it to 63%, close to the teacher's 67% with 80× fewer parameters.
– Benchmarked serving: with batching, 12× faster and about 7× cheaper than calling the teacher's API.

Mamba vs. Transformer Interpretability — *Python, PyTorch, TransformerLens* Aug. – Sep. 2026

– Trained Transformer and Mamba (state-space) models from scratch on an in-context learning task; used activation patching to localize the circuit: the Transformer concentrates it in 2 attention heads (68–80% recovery), while Mamba spreads it across the whole layer.
– Designed the controlled experiment to test a prior hypothesis, and reported the result although it disproved it.

SportsAnalytics: Human Movement Analysis — *Python, RTMPose, Pose2Sim* Sep. 2026 – Present

– Collaborative project building a human movement-analysis pipeline inspired by Pose2Sim and OpenCap: currently extracting 2D whole-body keypoints from video with RTMPose, with 3D kinematics and a time-series foundation model for performance evaluation as next steps.

Secretary-AI: Multi-Agent LLM System — *Python, OpenAI API, Hugging Face* Mar. – Jun. 2025

– Designed and deployed a multi-agent system automating medical-office workflows (scheduling, mailbox triage, summarization, prescription PDFs), switching between an external API and local GPU inference.

Experience and Leadership

Physics Oral Examiner, Lycée Hoche (CPGE), Versailles, France Sept. 2024 – Jul. 2025
Weekly oral exams in electromagnetism, thermodynamics and quantum mechanics, with individual feedback

Head of Partnerships, Télécom IA (AI student association), Palaiseau, France May 2025 – May 2026
Negotiated partnerships with tech and finance companies; organized talks, including Gaël Varoquaux (scikit-learn)

Skills and Languages

Programming: Python, C++, SQL.
Tools: Git, Linux, GPU training (Colab), LaTeX.
Languages: French (native), English (fluent, C2), Chinese (conversational).
